PROJECTS

CaneSee project - *Graduation project*

- Smart cane and glasses for blind people. The glasses are the part that recognizes what is in front of the user. They read signs, recognize colors, detect objects, detect human faces and their emotions and recognize people.

The cane is the part that he (sort of) touches the surroundings with its sensors.

The android application is the part that notify the user by uttering any output from the glasses or the cane to the user.

OQLP (Open Quran Learning Platform)

- It's an open source platform for learning the Quran. This platform connects whoever wants to recite the Quran and the teacher with each other. You can host courses on this platform also.

We have done most of the work on this platform, but still not done yet.

Menu App

- A single page website of a restaurant menu app.

Menu App (Backend)

- The back end side of the menu app repo.

Online bookstore (E commerce web for books)

- An e-commerce web for selling books. You can sell or buy books on this website. It was implemented with .NET framework using C# and MVC design pattern with CRUD actions.

LC3 Virtual Machine (Little Computer 3) *School project*

- A virtual machine that we implemented using python.
